

Catalytics

*Data driven conversations, actionable insights,
faster decisions*

Managing a business is no easy task, and it's not getting any easier. The modern business is now the extended enterprise and suppliers are increasingly integral to everything you do. When your key risks, current performance and future success is in the hands of others – your suppliers – you need to be sure that you are informed and in control, all the while ensuring you can meet the demands of your customers, shareholders, regulators and don't forget your business objectives. the suppliers.

So what technology is out there to help you? Nothing... until now.

Catalytics

From Proxima

Catalytics helps transform the way you work with your suppliers. Catalytics is smart, simple and affordable supplier management technology.

Catalytics is the real time visibility of a single source of truth. It is:

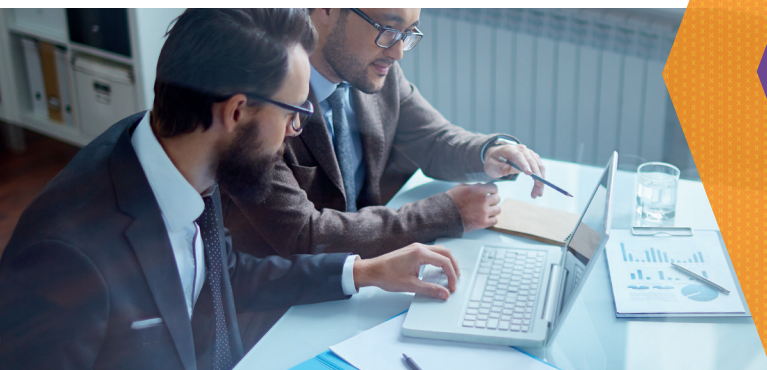

- ✔ A simple, cloud-based supplier management technology
- ✔ A supplier management program in a box, ready to use on day one
- ✔ Bursting with relevant tools, templates and dash boards waiting to be used
- ✔ Smart, with self-service and automation to drive accuracy and efficiency
- ✔ Flexile and able to be configured around your program needs
- ✔ Built by experts, saving you time and costs

Catalytics is a straightforward subscription and can be implemented in your business within days. In a world where procurement and supply chain technology is difficult, that doesn't seem possible, and yet it is. We've done all of the thinking already so all you need to do is make a few simple decisions and you are ready to go. No complex designs, no costly integrations and no lengthy roll outs. Simple, smart and affordable, Catalytics is modern technology for a modern supplier relationship.

Tired of seeing the same old solutions? Look at something different.

Powering the modern supplier relationship

Technology alone will not solve all of your supplier management issues. That's why we first looked at what business issues need to be solved, and then developed the technology, to do just that. Using Catalytics to power your supplier management program ensures that everyone involved in a supplier relationship understands exactly what to do, when and has the right tools to do it. And that includes your people and your suppliers.

Catalytics gives you real-time visibility, tracking, and analysis across your supplier base. It is the only cloud-based technology suite that comes pre-built with IP including calendars, templates, controls, questionnaires and dashboards, but it can also be configured around your business needs. Catalytics has been designed by operators, for operators.

Catalytics is focused on three pillars to help you:

Manage Risk

Catalytics creates a shared understanding of the risk points in your supplier network by unifying key supplier data in one place. This helps you move from reactive to proactive risk management and reduce your exposure. It provides:

- Dedicated dashboards for your key business controls
- Tracking and reporting of regulatory, ethical and security standards
- A view of current risks across suppliers and closure progress
- Management and administration of all your contracts in one place
- Self-service supplier onboarding and data maintenance

Enhance Performance

Catalytics gives you a clear view of how your suppliers and in-house teams are performing — from peer comparison scorecards to data rich 360s, Catalytics helps separate fact from fiction and take supplier management to a new level. It enables:

- Enterprise views of suppliers through intuitive scorecards
- Dedicated supplier 360 reports summarizing all key data points
- Tracking, managing and reporting of key supplier obligations
- Capture of stakeholder and supplier feedback in simple surveys
- Management of meetings, actions and improvements

Increase Value

Catalytics helps you understand and do the things that foster great collaboration with your suppliers so you can open yourself up to improvement and create a tangible difference to bottom and top line performance. It helps you:

- Capture, codify and report innovation and value projects
- Adopt a new framework of key behaviors and activities
- Embed planning in to your supplier relationships
- Take a more strategic approach to your most critical partners
- Manage activities and initiatives
